

Private Line Fact Sheet

Private Line delivers a dedicated connection that is always on

When your business requires reliable and real-time digital transmission, a Private Line can provide the path, connecting your enterprise network point to point. Private Line services allow you to connect your locations securely and efficiently to support high-capacity, two-way transmission of voice, data and video applications.

Private Line service creates a private, dedicated point-to-point connection that can be used to connect enterprise locations or interconnecting data centers for reliable and secure data transmission.

Triton offers private line circuits in a variety of bandwidths scalable to meet your business needs. The circuit can be used as a high-speed data connection for private applications connecting business with a regional or national footprint.
